

01-Induction and Overview Data Science And AI Training Program

Introduction

- Induction session for new students beginning Data Science & AI courses.
- Led by Abhishek Gupta (initial orientation, course overview) and Abhishek Singh (trainer; joins later for installation guidance).
- Covers types of programs, course structure, learning management system (LMS) navigation, support/resources, and addresses participant questions.

Course Offerings & Structure

- Multiple course tracks offered:
 - Data Science and AI Certification Industrial Training for Freshers
 - Business Analyst and Data Analyst Course
 - Data Science and AI Certification with Domain Specialization
 - Advanced AI and ML Certification with Domain Specialization
 - Data Science and AI Certification for Managers and Leaders
 - Job Guarantee Program (with its own policies)
- All programs share a foundational Python module (40 hours), followed by specialized tracks.

- Programs combine live online classes, assignments, tests, capstone projects, and real-time project tracks.

Curriculum & Modules

- Common core: Python (40 hours), Statistics & Machine Learning (48-70 hours, varies by program)
- Tools/technologies: SQL, Tableau, Power BI, MongoDB, Big Data, R Programming (hours vary)
- Advanced modules: Deep Learning, NLP, Computer Vision, Reinforcement Learning, Data Structures & Algorithms (DSA; hours vary by program)
- Managers/Leaders track: Includes Advanced modules + Project Management (55 hours)

Assignments, Tests & Certifications

- Regular weekly assignments for practice and evaluation
- Capstone projects (after key modules) require real-data problem-solving within set deadlines
- Multiple modular tests (after major modules), and a final proctored test (combining MCQ and programming/case study questions)
 - Passing criteria: typically 60% and above
 - Final test mandatory for IBM certification and job assistance
 - Up to 3 attempts for LearnBay final test with 3-month intervals between failures
 - IBM certification test allows 2 attempts
- Feedback provided after assignments/assessments for targeted revision

- Test and assignment content tailored to ensure alignment with required industry skills.

Projects & Domain Specialization

- Two main Capstone projects per course (after Statistics/ML and after Deep Learning/NLP)
- Real-time guided project tracks run weekdays and weekends for hands-on practice
- Domain Specialization:
 - Students can choose up to 2 preferred domains (e.g., banking, mechanical)
 - 2–3 projects per chosen domain, plus access to other domain projects
 - Managers/Leaders program provides exposure to all domains
- Tailored project assignments based on domain choice to aid career transition

Job Assistance & Job Guarantee Program

- For job assistance (after test/certification):
 - Resume preparation with expert feedback rounds
 - Mock interviews and feedback
 - Placement portal to apply to exclusive job listings
 - Placement process includes checking eligibility (assessments, assignments, attendance)

- Average placement offers range from 18-20 LPA; variation possible based on background/performance

- Job Guarantee Program:

- Separate track with stricter requirements (attendance: 85%, assignment submission, tests cleared)

- Attendance and assignment rules strictly monitored

- Eligibility dependent on clearing all course requirements and compliance with program terms

- Placement roles available for technical (Data Scientist, Engineer) and non-technical/professional tracks (Product Manager, PMO, etc.)

Access, Attendance & Support

- Three years' access to live classes; lifetime access to recorded sessions via LMS

- Option to retake modules within the validity period, especially recommended if foundational concepts need reinforcement

- Attendance requirements: 75% for standard programs; 85% for Job Guarantee

- Attendance is tracked by the LearnBay team via meeting logs; names must be clearly set in Zoom

- Assignments, class notes, and solutions are shared via Google Drive and LMS

- Strict policies on Zoom link sharing and device access (maximum two devices allowed for joining classes)

LMS & LearnBay App Navigation

- Access to courses, schedules, Zoom links, assignments, and course drives via LMS portal
- Important features:
 - Dedicated batch info, schedules, special classes, drive links
 - Direct access to technical support/calendars for booking 1-on-1 doubt-clearing sessions
 - Sample resumes, assignment uploads, and grades
 - Pre-recorded material for many topics available for self-paced review
 - Students use batch codes to join relevant classes in the app/LMS
 - LearnBay app includes chat, announcements, support, and direct messaging
- Support for reporting issues and raising tickets for non-technical problems

Technical Support & Doubt Resolution

- Bookable 1-on-1 technical sessions for any course/module doubts
- Multiple slots available per day; limit 2 consecutive slots per student (to ensure availability for all)
- Emphasis on using provided notes and video resources for revision and research

FAQs / Student Queries Addressed

- Eligibility for domain selection (immediately or after Statistics/ML)
- Clarification on project participation and access to extra modules (e.g., Advanced Excel, Visualization tools)
- Retaking failed tests and mandatory waiting periods
- Level of depth in tools (Tableau, Power BI, SQL: taught to data science-useful level, not as mastery courses)
- Batch joining, transition, and technical troubleshooting (LMS/app access, joining issues, schedule clarity)
- Importance of fixing daily study routines and revision for successful completion
- Policy on forming peer groups (not allowed outside official channels)
- Guidance for non-programmers, managers, and experienced professionals on course upgradation or optimal track
